

INTERNATIONAL CONTROL SYSTEMS

INTERNATIONAL CONTROL SYSTEMS

الشركة الدولية
لأنظمة التحكم

ICS is one of the biggest companies in the field of light current which is working with the latest technologies away label in the field

ICS provides the best integrated solutions to suit the need of its clients by supporting , supplying , designing , installing and maintaining the systems of which all the quality international brands are used

— Mission

Mission of ICS is to give our our clients the best service and aftersales support that may experience. Our management team has professional administartive qualities that can help the company in operating and dealing with customers and developers

— Vision

Our vision is to be number one favorble company in design and automation field within the Egyptian market in the coming years and to see every building equipped with the latest technology in automation and to reduce the gap between the marketing and the leading countries in the green building technology

Lighting Control

A high-tech system to control the degree of illumination by increasing the ratio of the internal capacity in places and reducing the percentage in other places automatically, by means of a special program, which gives consistency and harmony in colors and elegance in design. The International Company is the sole agent in Egypt for Lutron, the smartest and most powerful company in this field

Guest Room Management Service (GRMS)

This system enables customers to control hotel rooms and reach the the most comfort for hotel guests, in addition to full control on the part of management and follow-up consumption

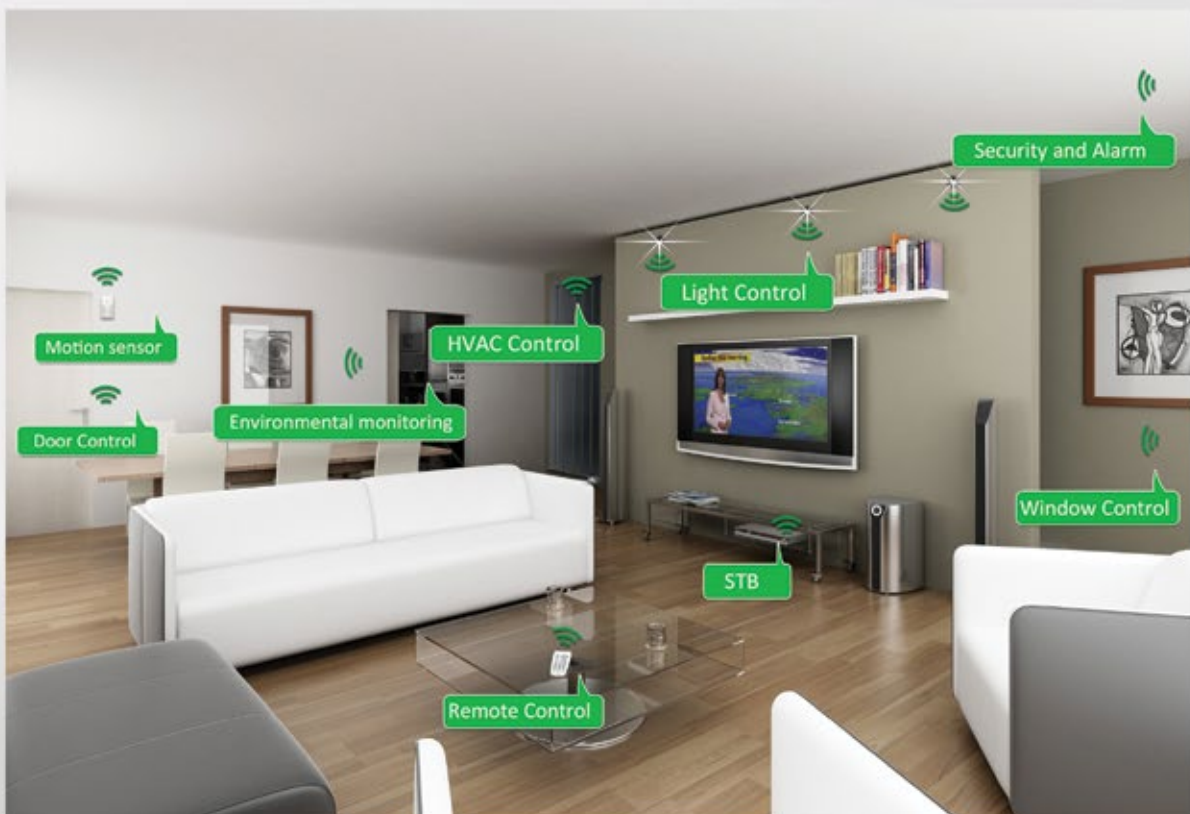

Shades

Can be remotely controlled and could be linked to the lighting

Home Automation

The home automation systems are used for controlling the indoor & outdoor lights, heat, ventilation, air conditioning in the house, to lock or open the doors & gates, to control electrical & electronic appliances and so on using various control systems with appropriate sensors

Fire Alarm System

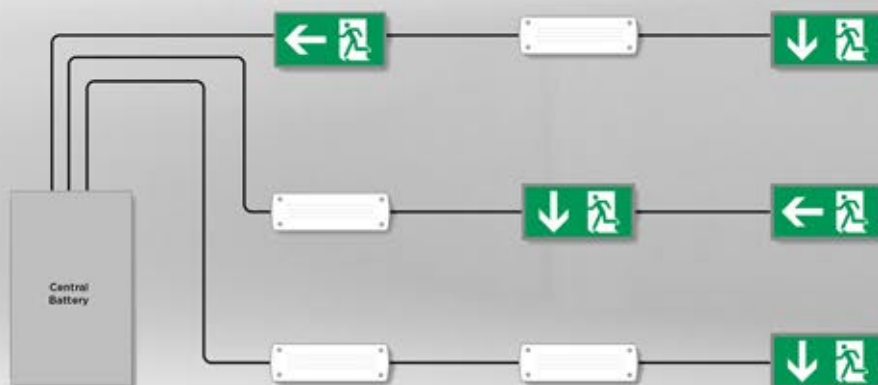

-Conventional Fire Alarm

-Intelligent Addressable Fire Alarm

Central Battery Systems (CBS)

High quality Central Battery Systems, from small central backup power supply units to big, centrally monitored Emergency Lighting systems, containing thousands of addressable Emergency and Exit Lights

Access Control

Is the system used for entry exit plates and to keep the attendance record System is also installed in hotel rooms where the resident controls all the room such as (lighting system and air conditioning) remote to provide the most comfortable ambience

Hotel Door Access

Is a system that controls the entry and exit of guest room through the use of cards

Closed Circuit TV System

Our company provides the latest technology in cctv using the latest NVR - Based technology in g-times more than its market - peer and the ability to connecting with other systems for instance (Access control and intrusions systems) also the ability of transmitting the best quality audio and video signals in addition of remote controlling

Cameras

Characteristics

- High quality images
- Day and Night vision
- Auto lens adjustment
- Motion Detection
- Image zoom 35X
- Shock Proof Resistance
- Dome Camera

Body Temperature Measurement System

Accurate face tracking Present result in real time

Face recognition algorithm is used to accurately locate the temperature to the target

Bi-spectrum dual channel All-weather real-time monitoring

Visible light can capture human face and thermal imaging can monitor body temperature

Multi-Objective fast non-contact temperature measurement

Complete 16 target temperature measurements with 30 milliseconds at a distance of 3-5 meters

Temperature ≤ 0.3 C accuracy ≤ 0.3 C

Modified ≤ 0.3 C (emissivity, distance, ambient temperature, etc)

— Obstruction Lighting System

Are high-intensity lighting devices attached to tall structures as collision avoidance measures. Such devices make structures more visible to aircraft, and are usually used at night, although they may be used during the day. These lights need to be of sufficient brightness to be visible for miles around the structure

IPTV

Stands for internet protocol television system, through which we can provide the subscriber with a high quality TV channel, Video and Music on demand. IPTV system represents an alternative method of video distribution, including stored contents, live programs and video on demand, all on a single IP connection and through computers or set-top-boxes

Nurse Call

There is a system in hospitals to enable the patients to call the nurses when needed without troubles

Sounds and conferences

Conferences and simultaneous interpretation

Audio Visual System

Turn any conference room into a video conferencing hub. Connect teams, customers and partners face to face. Model options give you the flexibility to deploy and scale in way that meets your needs

Queuing System

Systems runs in clinics , hospitals , Service centre and banks to call the customer's number automatically

Master Clock

System runs to adjust the time via satellite and it could be linked with building's LAN for unity time

Intrusion System

This system protects (Villas - Houses - Companies - Banks) against any intrusion inside

XRAY Baggage Scanner And Security Gates

The X-ray device are used to detect the contents of the luggage , also the security gates used for detection of of any kind of metals through electromagnetic field technology doors

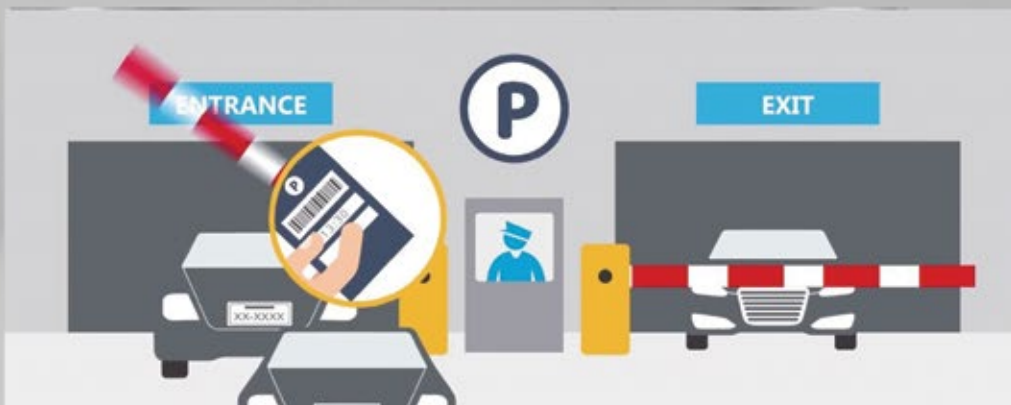

Hand Held Metal Detectors

The hand help metal detector are used to detect metals hidden in human body

In and out system for Cars Parking System

Gates for organizing entry and exit using cards for cars
